

VACUUM

ABOUT THE VACUUM UNIT

SHERPA mini-loaders has adapted its vacuum system for its electric models: **SHERPA 100 ECO**, **SHERPA 100 2Speed** and **SHERPA 100 EHD**. The vacuum system has been revised and adapted for the electric models. This has made it more compact, making it easier to assemble on the machines. The compact vacuum unit is mounted under the lifting arm on the front of SHERPA.

The vacuum pump can be controlled by pressing a button to the left of the machine and the pressure valve is mounted close to the controls so that the operation is simple. The pressure meter indicates how much vacuum pressure there is under the suction cup, so that a weight of +/- 200 kg can be lifted in combination with the machine (the surface of the object is determining here).

PRICES

07565	Vacuüunit 24V
01600	Sucking cup 350 x 450
01350	Lifting arm, excl. certificated lift
01750	Sucking cup bracket 420 mm
